PRESS RELEASE

Dutch Cloud Community welcomes Cohesity as supporting organization

Den Haag, 07-10-2021
Dutch Cloud Community, the association for Dutch providers of hosting, cloud and internet services, is pleased to announce that, Cohesity, a leading provider of next-gen multicloud data management solutions has joined the association as one of the supporting organization.

Dutch Cloud Community is a new industry association resulting from the merger between DHPA and ISPConnect (January 2021). The Dutch Cloud Community is the advocate partner for providers of hosting, cloud and internet services, and its main goal is to increase the awareness of its members and to drive business opportunities for them, with Dutch businesses.

Cohesity radically simplifies data management. Its solutions help businesses easily protect, manage, and derive value from data --across the data centre, edge, and cloud. It utilizes a suite of services, consolidated on one multicloud data platform, and eliminates one of businesses biggest pain points, mass data fragmentation. Cohesity can be delivered as a service, self-managed, or provided by a Cohesity-powered partner.

Simon Besteman, Managing Director Dutch Cloud Community: "*Cohesity is a leader in cloud data management and an innovator too. Therefore Cohesity makes a welcome addition to our supporting network and brings significant knowledge and information to us and our members. We will be unveiling a series of events for members including webinars, newsletters, reports and surveys we create jointly. We are proud Cohesity is joining us as one of our Founding supporters. These supporters are vital to ensure we offer our members as much added value as possible and growing an interesting network.*"

Mark Adams, Regional Director NEUR: "*Cohesity is delighted to join the Dutch Cloud Community as a supporting organization. Legacy solutions have struggled to embrace the cloud as a native environment, let alone SaaS, whereas more cloud-centric solutions tend to offer only certain workloads rather than the full range of use cases. Cohesity is changing that with a next-gen data manage platform designed to support multiple use cases, workloads, and apps at web-scale across a true hybrid IT landscape.*

We are keen to work with the cloud community to offer either a customer-managed solution, or our Cohesity-managed SaaS implementation, or as some organisations prefer, a mix of both offerings. Together with this community, we will help service providers to consolidate silos and unleash the power of data and drive profitable growth for Cloud and managed services platforms."

Dutch Cloud Community

Dutch Cloud Community is the point of contact and advocate for Dutch providers of hosting, cloud and internet services. The association has an enormous amount of knowledge and is well aware of all the interests of stakeholders in the digital sector. As a result, the Dutch Cloud Community is uniquely able to represent the interests of its members.

On December 10, 2020, the name of the new association resulting from the merger between DHPA and ISPConnect was announced in a festive manner. Under the name Dutch Cloud Community, the new trade association will represent the interests of the more than 100 members in the cloud, hosting and internet sector.
